

## **Annotations to the practice report**

**On the topic: "Review and research on the development of the production of molded automobile weights and the study of their dynamic impediments"**

**Practitioner: Zaitsev V.M.**

**Completed: 4th year student**

**CDF, gr. PM-41**

**Romanchuk Dmitry**

Any industry, as well as agriculture, can not exist without weight equipment. It is also used when delivering goods to warehouses, customs, at different transport nodes. To date, the various types of weights are used, depending on their purpose and task.

Automobile scales are used for the most accurate accounting of the mass of goods transported by road transport, the quantity of which grows very fast every year. With their help, many tasks are solved in the field of state control and supervision, as well as in the industrial sphere, transportation, trade, agriculture.

During the course of the study different types of car scales were investigated. A review of the companies and companies in Ukraine and the world, which manufactures automotive products, is made. The work principle, structure and their characteristics are studied. The possibilities of application and exploitation are explored.

An overview of dynamic impediments when measuring mass on automobile scales is made.
