

## **Annotation**

Pre-diploma practice is connected with the diploma project of the bachelor on the theme "Rivnemir". In pre-diploma practice, I used the theoretical skills acquired at the university.

The aim of pre-diploma practice is to get students practical skills after studying the theoretical material and the new information necessary for writing a diploma project.

In practice, I got acquainted with the equipment of the department, studied their design, determined the shortcomings and advantages of a particular model. In the laboratory there was presented a disk of bend bend, reference kiosks, dynamometers.

Keywords: deformation, dynamometer, torque
