

Summary

Pre-diploma practice is connected with the graduation project of the bachelor on the topic "Momentometer". In pre-diploma practice, I used the theoretical and practical skills that I acquired at university.

The aim of pre-diploma practice is to get the student practical skills after studying certain material required for the graduation project.

In practice, I got acquainted with the equipment of the laboratory. In the department were presented stands of disk bending, dynamometers, stands for measuring beam deformation and torque.

Obtaining knowledge of measuring the above quantities can be applied to my graduation thesis, namely the design of the device "Momentomir".

Key words: dynamometer, torque, bend, gear.
