

Annotations

During the course before graduation, we were acquainted with the work of engineers and programmers at the enterprise, exhausted a large amount of information on the thesis, namely, the variety and principle of the work of LEDs, dimmers, motion sensors and illumination. They were acquainted with all the processes of the preparation and production of fixtures and their tests and checks on various external factors.

"Svitekcom" uses voltage stabilization power supplies. This ensures high efficiency of the fixtures. After all, the modules do not contain resistors like an ordinary LED tape.
