

## Annotation

Pre-diploma practice is connected with the diploma project of the bachelor's degree on the topic "Signaling the fire in LBT". In pre-diploma practice, I used the theoretical skills acquired at the university. During the internship at the OJSC "Meridian" them. SP Koroleva familiarized with the services and products that she produces, namely:

- Unmanned aerial systems
- frequency meters
- frequency generators
- radio products
- electricity meters
- spectrum analyzers
- power supplies

I had an opportunity to see how the production process was going from the initial stage to the time of production.
