

## Summary

Pre-diploma practice was held at the state-owned enterprise "SRI" Kvant ", which is structurally part of the State concern" Ukroboronprom ". The enterprise participates in the production of a variety of complexes and systems.

Production practice took place in the department of instrument making. The department is involved in the control and development of documentation, design of devices, radar systems, and more.

Throughout the practice, there was a familiarization with the safety equipment at the enterprise, the development and storage of instrumentation documentation, methods of designing and designing devices, various types of range finders and their applications. Acquainted with the local library and the history of the enterprise, reviewed the literature on the issue.

It was possible to observe the process of manufacturing devices, developing drawings and participating in the process of working in AutoCAD.
