

Annotation

Practical training was held at the enterprise "State Enterprise of Special Instrumentation" Arsenal in the engineering department NTK-1. The division is engaged in the control and unlocking of documentation, designing of special equipment and machinery, as well as the manufacture and manufacture of finished products.

During the practice, significance and methods of conducting static and dynamic testers were carried out, participating in the static examinations of the accelerometer on a rotary table in the chamber of heat and cold, dynamic tests on centrifuges and vibrostents.

During the practice, the significance and structure and tension of the enterprise, the study of the design features of the devices developed at the enterprise was carried out, it was possible to participate in the direct process of testing motion sensors.
