Student: Krynitsky O.V.

Annotation

Pre-diploma practice is associated with a bachelor's degree project on «Weight-measuring system of welding of liquid substances in motion» In the pre-diploma practice I used theoretical skills acquired at university. The main task standing to study the theoretical information about the types of wagons and how to weigh them. In practice, I did an overview of the different types of carload scales, their calibration and control during loading. As a result of the practice, knowledge was created on the development of wagon weights that would be weighed in motion.
